DETAILED ACTION

Response to Amendment

1. In the amendment filed on 11/29/2010, claims 24, 25 and 27 have been amended. The currently pending claims considered below are Claims 24, 25 and 27.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The prior arts of record Kanazawa et al. (US Patent 6,580,870 B1) and Mohan et al. (US Patent 7,313,809 B1) teach analogous art to the instant application, that of reproducing audiovisual information stored on a recording medium and retrieving additional content from a content server from presentation to a user. Kanazawa more specifically teaches retrieving related information to audiovisual information from a web server upon user selection. Mohan more specifically teaches presenting related content retrieved over a web browser based on content of a recording medium. However, after careful consideration of the Response (pages 6-8) filed 11/29/2010 and the telephone interview held on 10/28/2010, the applicant extensively and specifically pointed out how the claims overcome the prior art of record, particularly the prior art of Kanazawa teaching reproducing audiovisual information from a recording medium with related content downloaded from a server based on URL information stored in the recording medium, but does not specifically disclose storing state information in the recording medium that can specify content to be downloaded in the first state and content to be downloaded and reproduced along with content on the recording medium in the second

state. The prior art of Kanazawa in view of Monahan does not specifically teach storing data in the recording medium which includes information representing either one of a first state to directed the related content to be downloaded and a second state to direct the related content to be downloaded and played back, the state information utilized to automatically determine how content downloaded from a server is accessed and presented to a user. Thus, in the instant application, content downloaded from a server based on information stored on a recording medium can be either downloaded or downloaded and played back to a user based on state information, so that correct information can be retrieved based on the first or second state.

The feature of retrieving content based on state information stored on a recording medium is indicated in claim 24, wherein the claim teaches "wherein the data is reproduced and extracted from the recording medium and accessed by the system control module to control the operations of the recording medium control module and the network control module, such that the related content is directed to be downloaded if the data includes the information which represents the first state, and the related content is directed to be downloaded and played back if the data includes the information which represents the second state; wherein whether the system control module downloads the related content or the control module downloads and plays back the related content is determined by reproducing the data which includes information represents the first or second state;" and similarly in independent claims 25 and 27. Consequently, independent claims 24, 25 and 27 are allowable over prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
